

Stacey quickly found her footing in a position that provides a lot of variety and potential for growth

Device Specialist Success Story

As a recent graduate of a cardiac device training program, Stacey Lubin has lots of experience volunteering in many sectors of the health industry, ranging from Cath labs to EKG tech work, and even physical therapy. The knowledge she's gained from these experiences has made her well suited for her current role as a Device Specialist for IronRod Health. Stacey works remotely, and her job usually consists of preparing reports for doctors and offices to review. Stacey also goes to clinics to conduct device checks and reports to the doctors who decide what the next steps are for patients.

Stacey found out about IronRod Health through an internet job-search platform. After a thorough three-stage interview process, which included a video conference interview, a physical interview in Florida, and finally a phone interview, Stacey quickly found her footing in a position that provides a lot of variety and potential for growth. Stacy says, "I like the people a lot, and it's a team-oriented environment. I never feel ashamed to ask questions."

What Stacey likes most about working at IronRod is the room she has to grow in her position. Stacey states that "if you are flexible, stay open-minded, and are driven, there's a lot of room to grow in this area that would have taken years to get into." She doesn't feel like just another employee in the Cardiac Monitoring world, saying, "I feel like I work for someone who cares about me. As long as you work hard and are honest, you will be rewarded and recognized."
